

Speech and Language Therapy Activities Speech Sounds

Input Modelling

Aim of these activities

Children who find sounds difficult to say, benefit from hearing an adult say sounds to them. The aim of these activities is for your child to listen to you saying the sounds they find more difficult

How to help

Aim to produce 20 sounds in an activity. You can just focus on a few sounds and produce these repetitively. Make **speech** sounds during an activity.

For example, make a sound each time you:

- Thread a bead on a rope
- Roll a ball to each other
- Put a brick on a tower

More activities

Collect together toys or pictures containing the same sound, e.g. 'b', 'd', 'g', etc. As your child looks at the toys or pictures, say the word. Try bringing it near to your face as you say it so they are watching you say the word too.
