

SPEECH AND LANGUAGE THERAPY PROGRAMME

TARGET SOUND: _____

Name: _____

Overall Aim: To make the target sound on its own and with a vowel

Try to work through the activities for at 5-10 minutes at least 3 times a week, daily if possible.

Every time you do some work, circle one of the stars. You could also make your own reward chart if you like!

Well done!

Activities

1) Production of the target sound in isolation

Once you have practiced making this sound on it's own you can move on to the next activity.

2. Production of the target sound with a vowel.

Have a go at saying the target sound alongside these sounds. Try cutting out the target sound picture and the vowel pictures (with help) and begin by saying the sounds separately at first and then move them together.

For example, 's.....ee' then move the sounds closer together so you get 'see'.

TARGET SOUND 	ar 	oo 
a 	er 	ee 

Now practice saying all the sounds together:

's..oo' 's..ar' 's..a' 's..er' 's..ee'
